

Oil-finished product

Maintenance guide

Daily cleaning

For daily cleaning, use a clean, dry cloth, ideally a cotton cloth. Avoid scouring pads or synthetic cloths as these may cause scratches

To remove dirt, use a damp cotton cloth firmly wrung in clean water

Never use harsh or abrasive cleaning agents, as this may damage the furniture

Use cleaning agents without solvents and only use mild soap

Reapplication of oil

Clean the surface with mild soapy water

Wipe the surface dry and then apply neutral or white pigmented furniture oil (depending on your furniture)

In case of heavy wear on the furniture, sand the surface lightly with 220–280 grit sandpaper until the surface is even and smooth before applying oil. **Important note:** Always sand in the direction of the grain. Clean the surface afterwards with a damp cloth

Follow the instructions for application, drying time and removal on the oil product you are using

Do not cover the surface until the oil has set

Important: Oil-soaked cloths should be disposed of in an airtight bag with a little water as they may be highly flammable
